

Marine AR™

High-performance
anti-reflective cover glass

Marine AR™ is an advanced anti-reflective coating specially developed for the tough environment in marine- and offshore environments.

Our Marine AR™ coating reduces light reflections to an absolute minimum and has exceptional UV- and saltwater resistance.

Typical applications are radars, fish finders, and navigation and communication systems exposed to saltwater and sunlight.

Marine AR™ can also be used in hospital environments because of its excellent resistance to disinfectants and cleaning agents used in this environment.

Technical Data

Base Materials:	Solaris™ or Cleartech™
Light Transmittance:	Up to 99%
Reflection:	<1%, single-sided
Thickness:	2mm & 5mm
